

# The Assistant Manager™

## INVENTORY MANAGEMENT

### Stock Level Management

Easily and quickly produce SKUs, record inventory receipts, and produce pricing tags and labels. Replenish inventory in an effective and timely manner.

#### Establish SKUs

Create many types of items including hard goods, soft goods, and food. Define each SKU's department, category, classification, vendor, case pack, cost, selling price, and more to track performance and status.

#### Manage Stock Orders

Monitor a vendor's items and quickly fill orders needed. Process order receipts and instantly produce barcoded pricing labels and/or tags. Process and track vendor returns in a snap.

#### Sales Integration

Sell all items in any business unit desired with seamless and real-time integration to POS for food, POS for merchandise, and Web sales.

### Proactive Reporting

While selling products, track key performance metrics on every item. Use these metrics to help control your largest investment and prevent it from controlling you!

#### Be a Know-It-All

TAM's real-time metrics include stock levels, valuation, rate of sale, gross margin return on investment, turn, sell thru, and cost of goods sold.

#### Advanced Reporting Options

Advanced reporting provides for open-to-buy planning, sales forecasts, and projecting stock outages.

#### Automatic Replenishment

Be reminded automatically when a vendor needs your attention. Set minimums by location and reorder levels. Once alerted, effortlessly place timely and accurate reorders.

### Accurate Multi-Location Support

Allow for efficient tracking of multiple locations and business unit inventory levels. Know where each item is at a moment's notice.

#### Unattended Data Synchronization

Schedule and synchronize new items, price changes, and sales activity between remote locations without human intervention.

#### Flexible Views

Report by specific location or business unit, region, district, or consolidate all locations. Create, receive, and distribute vendor orders for a single store or split orders for multiple locations.

#### Transfer Management

Quickly create transfers, print distribution documents, acknowledge receipt of stock at destination location, and report any exceptions that occur.

### Handheld and Mobile Adapter

Optionally, utilize devices from smart phones to tablets and more for key inventory functionality.

#### Mobile Inventory Processing

Use select mobile devices for inventory counts, inventory adjustments, and on-hand verification. We have an app for that!

#### Mobile Store Transfer Processing

Use select mobile devices to establish transfers and check in receipts.

#### Integrate to Count Service Providers

Import count results provided digitally from well known inventory count service providers. Interface with providers like RGIS and more.
