## POINT OF SALE FOR DINING

### Increased Throughput

Dramatically increase transaction speed with the minimal touch approach to our proven register application design.

#### Flexible Menus

Easy to establish and change on-screen menus that include menu items and both optional and mandatory modifiers.

#### KDS Ready

Expedite orders to the kitchen with integrated kitchen printers, kitchen displays, and bump bars.

#### Designed for Hospitality

POS specifically designed for many hospitality venues including cash and carry, table or full service, and tab service.

### Secure at Many Levels

Multiple levels of security that allow for restriction of features backed up by reliable auditing capabilities.

#### Users

Application password security restricts access to only authorized team members.

#### Associates

Register password security defines features accessibility to all access, no access, or access only with a manager's approval.

#### Registers

Idle timeout settings that eliminates unauthorized access.

### More than Just POS

An application that delivers functionality that is not typical in today's hospitality cash register applications.

#### Table Status Tracking

Quickly assign available tables and then monitor their status including reserved, occupied, ready for bussing, and back to available.

#### Labor Cost Tracking

Aids in critical staffing decisions by allowing the management team to monitor labor costs and traffic volumes in real time.

#### Basic Recipe Tracking

Combine ingredient items together into a bundled SKU that, when sold, relieves on-hand units from those ingredients individually.

### Cash Control

A combination of reliable automated monitoring, reconciliation, and auditing tools that prevent loss.

#### Cash Reconciliation

Easily reconcile currency and prevent loss at end of day or shift, by register or by associate.

#### Detailed Audit Trail

Instantly record all cash register activity in an electronic journal file that provides the highest level of detailed auditing capabilities.

#### Fraud Alerts

Management team instantly receives either text or email notifications for suspect events like excessive discounts, excessive tips, and more.

## POINT OF SALE FOR DINING

### Advantages Just for Hospitality

Built-in business rules that naturally promote and increase efficiencies in food service operations.

#### Advanced Tab Tracking

Easily enter, split, transfer, divide, and settle tabs at a moment's notice.

#### Course and Seat Tracking

Know which menu items were ordered by each guest and their seat at the table.

#### Tip Tracking

Record and report cash tips and enforce tip percentages on large groups.

### Converged Commerce

A POS developed to work hand-in-hand through seamless integration with all of our application options.

#### Inventory Management

Delivers accurate, real-time, and perpetual inventory control.

#### Payment Processing

Delivers secure and accurate payment processing.

#### Customer Relationship Management

Provides robust customer relationship support.

### POS for Dining Adapters

Plug ins that increase this option's capabilities. Adapters can be purchased initially or added later.

#### Redundancy

Customer facing transactions can't wait if connectivity is lost. This adapter allows continued service of patrons offline and accurately posts activity once back online.

#### Employee Charge

Track each employee's eligibility, credit limit, purchases, payments, and balance. Seamlessly integrate to HR applications or authorized ECPs.

#### Time and Attendance

Track each employee's time clock punches and hours worked. Allow administrative review, production timecards, and share this data with many payroll applications.
